Allowable Subject Matter

1. Claims 1-21 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. The prior arts of record do not anticipate or render obvious to one skilled in the art a system for creating a patterned polarization compensator comprising a retardance characterization system for optically scanning the spatially variant retardance of a spatial light modulator and a compensator patterning system for writing a spatially variant photo-alignment pattern on the polarization compensator.
4. USPAT 5,499,126 discloses color-tuned retarders that are aligned with RGB LCD sub-pixels. USPAT 6,496,287 discloses a pattern of spatially variant retarders for counterfeit protection and USPAT 6,496,239 provides a patterned retarder mask useful for making other patterned retarders. Further, the fabrication of patterned retarders described in two related papers, "Technologies towards patterned optical foils" by B. Van der Zande et al., (published in the SID 03 Digest, pgs 194-197) and in "Photo-Aligned Anisotropic Optical Thin Films" by H. Seiberle et al. (published in the SID 03 Digest, pgs 1162-1165) discloses the use of polarized UV light to expose a photo-alignment layer, which is in turn coated with a liquid crystal polymer, to form the patterned retarders. However, none of the prior arts alone or in combination teach or suggest the claimed system.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
